

web-based erosion and sediment control

PermiTrack^{ESC}

It's not uncommon for a community, a construction company, an inspection firm, or a permitting agency to have just one person responsible for meeting the erosion control permitting requirements of dozens, even hundreds, of construction projects each year. So when a client asked us to develop a proactive way to track erosion and sediment control inspection requirements, we responded.

PermiTrack^{ESC} is a web-based erosion/sediment control permit tracking application that is accessed through the Internet. The application may be used via any computer/PDA with web access, allowing multiple staff, in multiple locations to view project-specific erosion/sediment control permit information.

Using a hand-held PDA or notebook computer, field personnel can visit a site, view the site's erosion control inspection history, create an inspection report, take and save photos, and record observations that are automatically entered into the database. No paper to keep track of and file. No re-entering information back at the office. And the information is immediately available to anyone with Internet access.

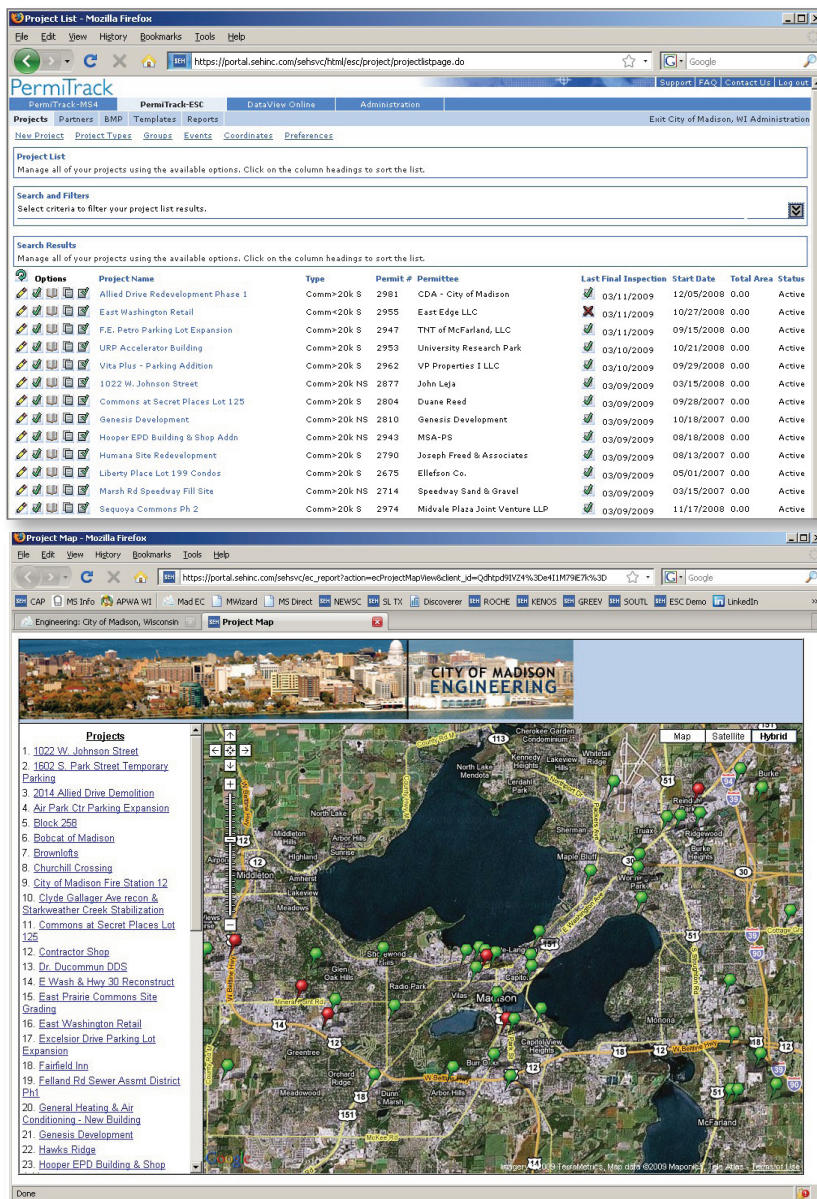

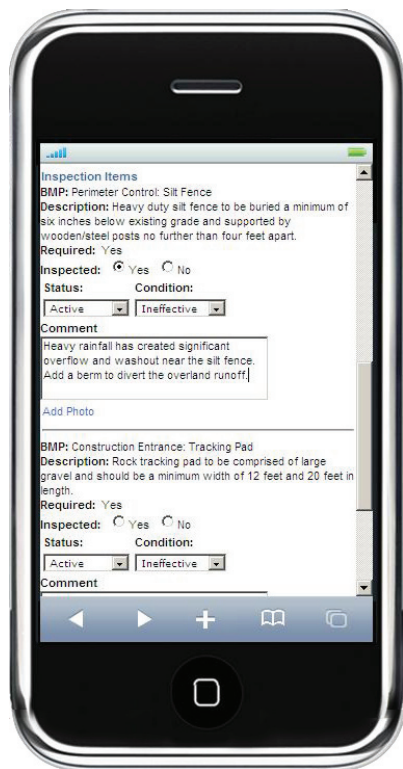

If desired, PermiTrack^{ESC} also allows everyone to play a role in monitoring erosion control. Users can provide a URL link

web-based erosion and sediment control, continued

to the Google™ map interface, where read-only access to all active projects may be viewed. If a problem is noted, PermiTrackESC immediately alerts the authorized inspector to conduct a site visit to determine if a violation has occurred. This not only saves staff time and money, but provides a great opportunity to positively interact with all interested parties.

See for Yourself!

Visit our website at www.mynpdespermit.com and request a **FREE** 30-day trial to see how easily PermiTrackESC can help you proactively monitor erosion and sediment control requirements and permittees.

Don't Take Our Word For It!

Click on "Clients" at the bottom of our website at www.mynpdespermit.com/customers.htm to see what they have to say about the PermiTrack suite.
